A full service GIS mapping firm specializing in the application of geospatial technology to community, regional, and environmental issues in the Pacific Northwest and around the world

### **CORE GIS**

In many geographic classification schemes, each class is defined by a set of criteria, that manifests as a spatial region. In this case, finding the region corresponding to each class can be implemented as a multi-criteria evaluation or Suitability analysis procedures. This is done using GIS analysis methods such as queries, buffers, overlay, and map algebra.

### **Classification - GIS Wiki | The GIS Encyclopedia**

Knowledge of Geographic Information Systems (GIS) is an increasingly sought after skill in industries from agriculture to public health. This Specialization, offered in partnership with ArcGIS developer Esri, will teach the skills you need to successfully use GIS software in a professional setting.

Vector overlay tools. Feature overlay tools are located in the Analysis toolbox, Overlay toolset. Conceptually, the tools are similar—they differ by the feature types they allow you to overlay, by whether you can overlay multiple layers at one time, and by which input and overlay features are maintained in the output layer.

### **Overlay analysis - Esri**

The Management Information Systems Department (MIS) is responsible for and provides mapping and land records products (parcel, tax, forest, etc.) and services, as well as support for our Geographic Information System (GIS) website both internally and externally.
