Drag Racing Traction Front Suspension

Drag racing is a type of motor racing in which automobiles or motorcycles (usually specially prepared for the purpose) compete, usually two at a time, to be first to cross a set finish line. The race follows a short, straight course from a standing start over a measured distance, most commonly 1/4 mi (1,320 ft; 402 m), with a shorter (1,000 ft (305 m)) becoming increasingly popular, as it ...

The Burnout. For the bracket racer, burnouts are a method of preparing the tires for maximum traction at the launch. To make a good water burnout, the water sprayed on the track (water box) must be evenly distributed so that both tires have an equal amount of water to spin in, and so both tires exit the water at the same time.

Car makers have to be conservative with ride height, even on sports models, to satisfy bumper height and other regulations. You are under no such constraints, so to get that aggressive stance, lose the ugly gap between the fenders and tires, and improve your ride's handling, we offer lowering kits. These kits contain progressive springs that will lower the ride height, but still provide a
