Heuristic Route Generation For The

Route assignment, route choice, or traffic assignment concerns the selection of routes (alternative called paths) between origins and destinations in transportation networks. It is the fourth step in the conventional transportation forecasting model, following trip generation, trip distribution, and mode choice. The zonal interchange analysis of trip distribution provides origin-destination trip ...

The travelling salesman problem (TSP) asks the following question: "Given a list of cities and the distances between each pair of cities, what is the shortest possible route that visits each city and returns to the origin city?" It is an NP-hard problem in combinatorial optimization, important in operations research and theoretical computer science. ...

The Crime Rate Perception Gap. There's a persistent belief across America that crime is on the rise. Since the late 1980s, Gallup has been polling people on their perception of crime in the United States, and consistently, the majority of respondents indicate that they see crime as becoming

more prevalent. As well, a recent poll showed that more than two-thirds of Americans feel that today ...

More specifically, there is one area that stands out from a visual standpoint, and it resides clearly in the southern portion of Asia. Home to 1.34 billion people, it's well-known that India already holds roughly 20% of the global population - but add Pakistan (195 million) and Bangladesh (165 million) into the mix, and you're already closing in on one quarter of the global total.

One of the largest cost drivers in running a service like Flickr is storage. We've described multiple techniques to get this cost down over the years: use of COS, creating sizes dynamically on GPUs and perceptual compression. These projects have been very successful, but our storage cost is still significant.

Solving Every Sudoku Puzzle by Peter Norvig In this essay I tackle the problem of solving every Sudoku puzzle. It turns out to be quite easy (about one page of code for the main idea and two pages for embellishments) using two ideas: constraint propagation and search. Sudoku Notation and Preliminary Notions

Creationists often argue that evolutionary processes cannot create new information, or that evolution has no practical benefits. This article disproves those claims by describing the explosive growth and widespread applications of genetic algorithms, a computing technique based on principles of biological evolution.
