Social cognitive theory (SCT), used in psychology, education, and communication, holds that portions of an individual's knowledge acquisition can be directly related to observing others within the context of social interactions, experiences, and outside media influences. This theory was advanced by Albert Bandura as an extension of his social learning theory.

Piaget's theory of cognitive development is a comprehensive theory about the nature and development of human intelligence. It was first created by the Swiss developmental psychologist Jean Piaget (1896–1980). The theory deals with the nature of knowledge itself and how humans gradually come to acquire, construct, and use it. Piaget's theory is mainly known as a developmental stage theory.

Cognitive theories of motivation seek to explain human behavior as a product of the careful study and active processing and interpretation of information received. Such a perspective runs counter to rationalizing human behavior as a result of automatic responses governed by preprogrammed rules or innate mechanisms involving drives, needs and reactions.

In May we looked at some of Richard Mayer's research-based principles of learning and training design. Another area of current thought in learning and brain science - closely linked to ideas around those discussed in May - relates to Cognitive Load theory. Prominent names here are John Sweller, Frank Nguyen, and Ruth Clark; I've included a reading list below.
