Specific terms and specialized language are used to describe equine anatomy, different life stages, colors and breeds.. Lifespan and life stages. Depending on breed, management and environment, the modern domestic horse has a life expectancy of 25 to 30 years. Uncommonly, a few animals live into their 40s and, occasionally, beyond. The oldest verifiable record was "Old Billy", a 19th-century ...

This is a basic glossary of equestrian terms that includes both technical terminology and jargon developed over the centuries for horses and other equidae, as well as various horse-related concepts. Where noted, some terms are used only in American English (US), only in British English (UK), or are regional to a particular part of the world, such as Australia (AU).

RECOMMENDED BEST PRACTICES. house unweaned calves individually or in well managed groups of less than 10 calves (9) provide bedding suitable for the housing system and seasonal conditions (e.g., straw offers more insulation than shavings for housing during cold months)

### **Code of Practice for the Care and Handling of Dairy Cattle**

Horses can use hay and other roughages as nutrient sources much more efficiently than other nonruminants such as poultry or pigs, although utilization is less efficient than in ruminants. Traditionally, it was stated that a good source of roughage should comprise at least 50% of the total equine ...
